

Serial No. 10/612,087

Attorney Docket No. 24-007

RECEIVED  
CENTRAL FAX CENTER  
JUL 14 2008

**LISTING OF CLAIMS:**

1. (Canceled)

2. (Currently amended) A laminate sheet windable into a roll, comprising:

a plurality of adhesive sheet portions having a predetermined form, formed from an adhesive sheet laminated on a long release sheet, and a protective member laminated on the long release sheet,

wherein said protective member is thicker than said adhesive sheet and is provided longitudinally on the long release sheet and spaced apart from said adhesive sheet portions so as not to overlap said adhesive sheet portions when said laminate sheet is wound longitudinally into a roll,

wherein said plurality of adhesive sheet portions are provided longitudinally and spaced lengthwise in a central portion of said release sheet, and said protective member is provided on both side portions of said release sheet in the direction of width of said release sheet,

wherein said adhesive sheet comprises a base material and an adhesive layer, the adhesive layer being disposed between the base material and the release sheet so that the release sheet is releasably adherent to the adhesive layer of the adhesive sheet portions,

wherein the base material and the adhesive layer are made of different materials.

3. (Canceled)

4. (Currently amended) A laminate sheet windable into a roll, comprising:

Serial No

87

Attorney Docket No. 24-007

ality of adhesive sheet portions having a  
pred. form, formed from an adhesive sheet laminated on a  
long sheet, and a protective member laminated on the  
long sheet,

n said protective member is thicker than said  
adhe. et and is provided longitudinally on the long  
rele. , spaced apart from the adhesive sheet portions and  
shap. intrude between the adhesive sheet portions so as to  
part. overlap said adhesive sheet in a radial direction of a  
roll and laminate sheet is wound longitudinally into athe  
roll,

n said plurality of adhesive sheet portions are  
provi. gitudinally and spaced lengthwise in a central  
porti. said release sheet such that gaps are formed between  
adjac. hesive sheet portions at least in the vicinity of  
both. adinal side portions of said release sheet, and said  
prote. member is wave-shaped and intrudes in the gaps,  
n said adhesive sheet comprises a base material and  
an ad. layer, the adhesive layer being disposed between the  
base. al and the release sheet so that the release sheet is  
rele. adherent to the adhesive layer of the adhesive sheet  
port.

n the base material and the adhesive layer are made  
of d. materials.

Previously presented) The laminate sheet according  
to c. wherein the thickness of said protective member is  
great. n the thickness of said adhesive sheet by 5 to 100 $\mu$ m.

Previously presented) The laminate sheet according  
to c. wherein the surface area of the overlapping part  
betwe. d protective member and said adhesive sheet portion

Serial No. 10/612,087

Attorn

No. 24-007

is not more than 50% of the surface portion.

7. (Currently amended) roll, comprising: a plurality of adhesive sheet portions having a predetermined form, formed on a long release sheet, the portions being spaced lengthwise on the release sheet, and a protective member laminated on the release sheet,

wherein said protective member is thicker than said adhesive sheet and is provided on the release sheet and spaced apart from the adhesive sheet so as not to overlap said adhesive sheet when said laminate sheet is wound longitudinally into a roll,

wherein said adhesive sheet comprises a base material and an adhesive layer, the adhesive layer being disposed on the base material and the release sheet so that the release sheet is releasably adherent to the adhesive layer of the adhesive sheet portions,

wherein the base material and the adhesive layer are made of different materials.

8. (Canceled)

9. (Previously presented) laminate sheet roll formed by winding the laminate sheet

Claims 10-14 (Canceled)

15. (Currently amended) claim 2, wherein said adhesive sheet portions have a planar form and a central hole-punch portion.

area of said adhesive sheet

ate sheet windable into a roll, comprising: a plurality of adhesive sheet portions having a predetermined form, formed on a long release sheet, the portions being spaced lengthwise on the release sheet, and a protective member laminated on the release sheet,

is thicker than said adhesive sheet and is provided on the release sheet and spaced apart from the adhesive sheet so as not to overlap said adhesive sheet when said laminate sheet is wound longitudinally into a roll,

prises a base material and an adhesive layer, the adhesive layer being disposed on the base material and the release sheet so that the release sheet is releasably adherent to the adhesive layer of the adhesive sheet portions,

the adhesive layer are made

laminate sheet roll formed by winding the laminate sheet

minate sheet according to claim 2, wherein said adhesive sheet portions have a planar form and a central hole-punch portion.

Serial No. 10/612,087

Attorney Docket No. 24-007

16. (Currently amended) A laminate sheet wound in a roll, comprising: a plurality of adhesive sheet portions having a predetermined form, formed from an adhesive sheet laminated on a long release sheet, the plurality of adhesive sheet portions being spaced lengthwise on the long release sheet, and a protective member laminated on the long release sheet

wherein said protective member is thicker than said adhesive sheet and is provided longitudinally on the long release sheet, spaced apart from the adhesive sheet portions and shaped to intrude between the adhesive sheet portions so that they partially overlap said adhesive sheet in a radial direction when said laminate sheet is wound longitudinally in a roll,

wherein said adhesive sheet comprises a base material constituted by a resin sheet, and an adhesive layer, the adhesive layer being disposed between the base material and the long release sheet so that the release sheet is releasably separable from the adhesive layer of the adhesive sheet portions,

wherein the base material and the adhesive layer are made of different materials.

17. (Currently amended) A laminate sheet wound in a roll, comprising:

a plurality of adhesive sheet portions having a predetermined form, formed from an adhesive sheet laminated on a long release sheet, the plurality of adhesive sheet portions being spaced lengthwise on the long release sheet, and a protective member laminated on the long release sheet,

wherein said protective member is thicker than said adhesive sheet and is provided longitudinally on the long release sheet

Serial No. 10/612,087

Attorney Docket No. 24-007

release sheet, spaced apart from the adhesive sheet portions and shaped to intrude between the adhesive sheet portions so as to partially overlap said adhesive sheet in a radial direction of a roll when said laminate sheet is wound longitudinally into athe roll,

wherein said adhesive sheet portions have a planar form that is ~~disc~~ ring shaped with a central hole-punch portion,

wherein said adhesive sheet comprises a base material and an adhesive layer, the adhesive layer being disposed between the base material and the release sheet so that the release sheet is releasably adherent to the adhesive layer of the adhesive sheet portions,

wherein the base material and the adhesive layer are made of different materials.

18. (Previously presented) A laminate sheet roll formed by winding the laminate sheet according to claim 4.

19. (Currently amended) A laminate sheet windable into a roll, comprising: a plurality of adhesive sheet portions having a predetermined form, formed from an adhesive sheet laminated on a long release sheet, the plurality of adhesive sheet portions being spaced lengthwise on the long release sheet, and a protective member laminated on the long release sheet,

wherein said protective member is thicker than said adhesive sheet and is provided longitudinally on the long release sheet and spaced apart from said adhesive sheet portions so as not to overlap said adhesive sheet portions when said laminate sheet is wound longitudinally into a roll,

wherein the adhesive sheet comprises a base material and an adhesive layer, the adhesive layer being in continuous contact with the long release sheet, the adhesive layer being disposed

Serial N 087

Attorney Docket No. 24-007

between base material and the release sheet so that the  
release sheet is releasably adherent to the adhesive layer of  
the sheet portions,  
in the base material and the adhesive layer are made  
of different materials.

(Previously presented) A laminate sheet windable into  
a roll comprising: a plurality of adhesive sheet portions  
having a predetermined form, formed from an adhesive sheet  
laminate and a long release sheet, the plurality of adhesive  
sheet portions being spaced lengthwise on the long release sheet,  
and a protective member laminated on the long release sheet,  
in said protective member is thicker than said  
adhesive sheet and is provided longitudinally on the long  
release sheet, spaced apart from the adhesive sheet portions and  
shaped to intrude between the adhesive sheet portions so as to  
partially overlap said adhesive sheet when said laminate sheet  
is wound longitudinally into a roll,  
in the adhesive sheet comprises a base material and an  
adhesive layer, the adhesive layer being in continuous contact  
with the long release sheet, the adhesive layer being disposed  
between the base material and the release sheet so that the  
release sheet is releasably adherent to the adhesive layer of  
the sheet portions,  
in the base material and the adhesive layer are made  
of different materials.

(Canceled)

(Currently amended) The laminate sheet according to  
claim 1 wherein said adhesive sheet portions have a planar form  
that is ring shaped with a central hole-punch portion.

Serial No. 10/612,087

Att. - let No. 24-007

23. (Currently amended claim 19, wherein said adhesive form that is ~~disc~~ring shape

laminate sheet according to : portions have a planar : central hole-punch portion.

24. (New) The laminate further comprising a protective contact and coextensive with opposite from the long release member comprises the protective sheet portion which is different sheet portions, said second different layer than the protective

according to claim 2, : ion provided in continuous : tective member on a side : , wherein the protective : ion and a second adhesive : m said plurality of adhesive : sheet portion being a : portion.

25. (New) The laminate further comprising a protective contact and coextensive with opposite from the long release member comprises the protective sheet portion which is different sheet portions, said second different layer than the protective

according to claim 4, : ion provided in continuous : tective member on a side : , wherein the protective : ion and a second adhesive : m said plurality of adhesive : e sheet portion being a : portion.

26. (New) The laminate further comprising a protective contact and coextensive with opposite from the long release member comprises the protective sheet portion which is different sheet portions, said second different layer than the protective

according to claim 7, : ion provided in continuous : tective member on a side : , wherein the protective : ion and a second adhesive : m said plurality of adhesive : e sheet portion being a : portion.

Serial No. 10/612,087

Attorney Docket No. 24-007

27. (New) The laminate sheet according to claim 1, further comprising a protective portion provided in contact and coextensive with the protective member on opposite from the long release sheet, wherein the protective member comprises the protective portion and a second sheet portion which is different from said plurality of sheet portions, said second adhesive sheet portion being a different layer than the protective portion.

28. (New) The laminate sheet according to claim 2, further comprising a protective portion provided in contact and coextensive with the protective member on opposite from the long release sheet, wherein the protective member comprises the protective portion and a second sheet portion which is different from said plurality of sheet portions, said second adhesive sheet portion being a different layer than the protective portion.

29. (New) The laminate sheet according to claim 3, further comprising a protective portion provided in contact and coextensive with the protective member on opposite from the long release sheet, wherein the protective member comprises the protective portion and a second sheet portion which is different from said plurality of sheet portions, said second adhesive sheet portion being a different layer than the protective portion.

30. (New) The laminate sheet according to claim 4, further comprising a protective portion provided in contact and coextensive with the protective member on opposite from the long release sheet, wherein the protective member comprises the protective portion and a second sheet portion which is different from said plurality of sheet portions, said second adhesive sheet portion being a different layer than the protective portion.

Serial No. 10/612,087

Attorney Docket No. 24-007

sheet portion which is different from said plurality of adhesive sheet portions, said second adhesive sheet portion being a different layer than the protective portion.
